

# Hands-on: Connect to Bitbucket, Create a PR, Review via Bitbucket GUI

## Step 1: Access Bitbucket Enterprise Web UI

- Open your browser and navigate to your company's Bitbucket Enterprise URL, e.g.:

```
1 https://bitbucket.yourcompany.com
2
```

- Log in using your credentials or personal access token if prompted.

## Step 2: Navigate to Your Repository

- From the dashboard, click on **Projects** or use the search bar to find your project.
- Select the appropriate **Repository** within the project.

## Step 3: Create a Pull Request (PR)

- Click on the **Pull requests** tab in the repository menu.
- Click the **Create pull request** button (usually top-right).
- Select the **source branch** (your feature branch) and the **destination branch** (usually `main` or `develop`).
- Add a **title** and **description** describing the changes.
- Optionally add **reviewers** by selecting team members for code review.
- Click **Create pull request** to submit.

## Step 4: Review Pull Request via Bitbucket GUI

- In the **Pull requests** tab, click on the PR you just created.
- Review files changed under the **Diff** tab.
- Use inline comments to provide feedback on specific lines of code.
- Check the **Activity** tab for discussions and status checks.
- Review build status (if CI/CD integrated).

## Step 5: Approve or Request Changes

- If you are a reviewer, you can:
  - Click **Approve** to approve the PR.
  - Click **Request changes** and add comments for required fixes.

## Step 6: Merge the Pull Request

- After approvals and successful builds, click the **Merge** button.
- Choose the merge strategy (Merge commit, Squash, Rebase) based on project guidelines.
- Confirm the merge.

## Step 7: Delete the Feature Branch (Optional)

- After merging, Bitbucket usually offers an option to delete the feature branch.
- Click **Delete branch** to clean up.
